What corrections did you have to make?

- I used a semantic tag for my nav bar.
- I added an alternative text customized for each user for every image in the post card and stories.
- I stuck to black text on a white background to contrast them and make them pop.

Given that the photos and captions rely on user-generated content, do you think that the accessibility problems are all solvable? Why or why not?

Not really. I think more could be done to make this website more accessible.

Do you think your website is usable if you turn off the CSS? Why or why not?

Yes. With CSS turned off, the website is still usable.

Do you think your website is usable if you turn off the images? Why or why not

Yes. I think the alt text will guide the users.

Errors
Missing form label

What It Means
A form control does not have a corresponding label.

Why It Matters
If a form control does not have a properly associated text label, the function or purpose of that form control may not be presented to screen reader users. Form labels also provide visible descriptions and larger clickable targets for form controls.

How to Fix It
If a text label for a form control is visible, use the <label> element to associate it with its respective form control. If there is no visible label, either provide an associated label, add a descriptive title attribute to the form control, or reference the label(s) using aria-labelledby. Labels are not required for image, submit, reset, button, or hidden form controls.

The Algorithm... in English
An <input> (except types of image, submit, reset, button, or hidden), <select>, or <textarea> does
